Professional Profile

Software engineer and **founder of Axynoxia**, a software engineering company delivering custom software, cloud and DevOps, AI automation, integrations, and e-commerce to growing businesses. I own delivery end to end: I architect the product, build it full-stack, ship it to production, and run the infrastructure underneath it. **6+ years of hands-on project experience** across enterprise platforms, SaaS products, mobile apps, and production e-commerce — with deep expertise in Kubernetes, Terraform, CI/CD automation, and cloud-native architecture on Azure, AWS, and OpenStack. Track record includes enterprise platforms serving **over one million users** in regulated industries, sovereign hybrid-cloud infrastructure for a Microsoft CSP Gold Partner, and automation delivering **70% faster deployments** and a **40% reduction in manual overhead**.

Core Technical Skills

Cloud and Platforms: Azure (Stack Hub, AKS, Public), AWS (EKS), GCP, OpenStack, DigitalOcean, Hybrid Cloud, IaaS, PaaS
Containers and Orchestration: Docker, Docker Compose, Kubernetes (AKS, EKS, K8s), Helm
DevOps and Automation: Terraform, Ansible, Jenkins, GitHub Actions, GitLab CI, CI/CD Pipelines, Infrastructure as Code (IaC), Nexus, Traefik, Portainer
Monitoring and Observability: Prometheus, Grafana, ELK Stack, CloudWatch, Custom Python Exporters, Alerting and Metrics Visualization
Security and Quality: Fortinet Firewalls, Network Segmentation, IAM, SonarQube, Trivy, MFA, OAuth2, RBAC, Data Encryption
Backup and Storage: Commvault, MinIO (Object Storage), Redis (Caching), SQL and NoSQL Backup Strategies
Systems and Identity: Linux (Ubuntu, CentOS), Windows Server, Active Directory, Microsoft 365, WSL
Programming Languages: TypeScript, JavaScript, Python, Java, C#, PHP, Bash/Shell, SQL, C++, Assembly
Backend Architectures: NestJS, FastAPI, Express.js, Django, Flask, Spring Boot, Node.js, RESTful and WebSocket APIs
Frontend Architectures: React (Vite, Next.js), Angular, Vue.js, Vuex, Tailwind CSS v4, Chakra UI, shadcn/ui
Databases: PostgreSQL, MongoDB, MySQL, Redis, Prisma, Mongoose, Sequelize, BullMQ (Job Queues)

Professional Experience

Founder and Software Engineer — Axynoxia Jan 2026 – Present
Tunis, Tunisia | tamim.hmizi@axynoxia.com

- Founded and run a **software engineering company** serving growing businesses: custom software, cloud and DevOps, AI and intelligent automation, systems integration, and e-commerce.
- **Own the full delivery lifecycle** on every engagement: requirements, architecture, full-stack implementation, cloud provisioning, CI/CD, observability, and production operations.
- Shipped and operate production systems including a **high-concurrency event ticketing platform**, a **Flutter mobile app published on the App Store and Google Play**, a **real estate CMS**, and **Shopify storefronts** for retail brands.
- Building **SaaS products** in-house — a modular ERP, an event ticketing platform, an invoicing platform, a leasing CRM, and a PV/BESS energy-management system — each deployed and running in production.
- Handle client relationships, technical scoping, and commercial delivery directly, in **Arabic, French, and English**.

Full-Stack Engineer — Bassetti Group (TEEXMA) Apr 2026 – Present
Tunis, Tunisia

- Full-stack development across enterprise applications using **.NET**, **Angular**, **JavaScript**, **HTML**, and **CSS** on the **TEEXMA** platform — a collaborative no-code enterprise solution for managing technical and scientific data.

- Maintained and extended **Delphi-based legacy modules** forming the backbone of TEEXMA's core processing engine.
- Containerized application workloads using **Docker** and contributed to automation and **DevOps** workflows.
- Worked on a product used by **over one million users worldwide** across regulated industries including Aerospace, Energy, Automotive, Chemicals, and Pharmaceuticals — for clients such as **Airbus**, **Safran**, **Framatome**, and **Saint-Gobain**.

Infrastructure Consultant — RFC (Microsoft CSP and Gold Partner) Oct 2025 – May 2026
Ariana, Tunisia

- **Engineered** and optimized **production hybrid cloud infrastructures** for a leading **Microsoft Cloud Solution Provider (CSP)**, integrating **Azure Stack Hub** with public Azure services.
- **Architected** sovereign cloud environments for enterprise clients, ensuring strict data residency and compliance via Microsoft-partnered architectures.
- **Orchestrated** enterprise-wide security and networking using **Fortinet SD-WAN** and **Cisco** logic to protect multi-tenant infrastructure.
- **Administered** business-critical backup operations using **Commvault**, implementing automated restore validation and failure analysis reporting.
- **Automated** recurring infrastructure tasks and security patches across Linux and Windows Server fleets, reducing manual overhead by **40%**.
- **Facilitated** high-level technical workshops as an **Infrastructure Subject Matter Expert (SME)**, empowering clients on cloud-native security and Microsoft 365 governance.

DevOps Platform Engineer — Final Year Project (PFE), RFC Feb 2025 – Aug 2025

- Designed and implemented a **DevOps-as-a-Service SaaS platform** to automate application analysis, deployment, and monitoring.
- Built a **monolithic core application** using **React**, **Express.js**, **FastAPI**, and **MongoDB**, with clear separation between frontend, API gateway, and backend services.
- Integrated an **AI-driven analysis engine (LLM-based)** to inspect Git repositories, application structure, dependencies, and runtime requirements.
- Implemented **multi-architecture deployment logic**, enabling automated decision-making between:
  - **Virtual Machine deployments** for one-tier and monolithic applications.
  - **Kubernetes (AKS) deployments** for microservices-based architectures.
- Developed two **e-commerce applications using the MERN stack** as real deployment use cases:
  - A **one-tier monolithic e-commerce application** deployed on a **Virtual Machine**, selected by the AI engine based on repository structure and runtime analysis.
  - A **microservices-based e-commerce backend** deployed on **Kubernetes (AKS)**, recommended by the AI engine due to service decomposition and scalability requirements.
- Automated **VM-based deployments** using **Terraform** for infrastructure provisioning, **Ansible** for configuration management, and **Docker / Docker Compose** for application delivery.
- Implemented **AKS microservices deployments** using **AKS Engine**, **kubectl**, and Kubernetes **YAML manifests** with per-microservice deployment templates.
- Designed and implemented **CI/CD pipelines using Jenkins**, covering build, test, quality, security, artifact management, and deployment stages.
- Integrated **SonarQube** for code quality analysis and **Nexus** for artifact management.
- Implemented full **observability and monitoring** using **Prometheus** and **Grafana**.
- Reduced infrastructure provisioning and deployment time by approximately **70%** through automation.

Cloud and Full Stack Engineer — Internship, RFC Jul 2024 – Aug 2024

- Developed a **cloud-native web application** for the **management of interns**, covering onboarding, tracking, and administrative workflows.
- Deployed the application on **AWS EKS (Kubernetes)** using a fully containerized architecture.
- Designed and implemented **end-to-end CI/CD pipelines** using **Jenkins**, **Docker**, **Terraform**, and **GitHub Actions**.
- Implemented **IAM security controls** and **application and infrastructure monitoring** using **Prometheus** and **Grafana**.

Web Developer — Internship, ESPRIT Jul 2023 – Aug 2023

- Designed and developed a **web platform that scrapes official educational websites** to collect and aggregate online courses.
- Implemented **Python-based web scraping modules** to extract course metadata such as title, provider, duration, and difficulty level.
- Normalized and stored scraped data in a structured database for efficient search and filtering.
- Developed backend services to rank and recommend the **best courses based on user search criteria**.
- Built a responsive web interface allowing users to search, compare, and discover relevant courses from trusted sources.
- Ensured data reliability by targeting only **official and verified course providers**.

Network Engineer Intern (C-NOC) — Tunisie Telecom Aug 2021 – Sep 2021

- Worked in the national B2B Network Operations Center.
- Monitored enterprise network links and handled connectivity incidents.
- Assisted in troubleshooting routing and service availability issues.

Projects

All projects below — Axynoxia products, Axynoxia client engagements, and independent work — were designed and built solely by me, end to end.

1. Enterprise Monitoring Platform — Azure Stack Hub (RFC Production)

- **Functional Overview:** Monitors Azure Stack Hub infrastructure health, storage fabric, and tenant VM performance (IOPS/Compute) in real-time.
- **Engineered** an industrial-tier monitoring ecosystem for **hybrid cloud architectures** using specialized **Dockerized exporters**.
- **Developed** high-performance **Python/Flask** micro-exporters to harvest telemetry from **Azure Stack Hub Admin APIs** via **Service Principal OAuth2** authentication.
- **Architected** centralized **Prometheus** scraping clusters and multi-dimensional **Grafana** heatmaps, providing sub-minute visibility into region health, storage fabric, and tenant VM disk IOPS.
- **Implemented** automated alerting thresholds and sophisticated observability metrics to minimize production downtime in sovereign cloud environments.

2. Axynoxia ERP — Modular ERP Platform (erp.products.axynoxia.com)

- **Functional Overview:** Business management suite where modules (CRM, inventory, accounting) plug into a shared core. Each client is deployed single-tenant, with its own database and containers.
- **Architected** the platform as a **pnpm monorepo** on **NestJS**, **Prisma**, **PostgreSQL**, and **Redis**.
- **Implemented MFA (QR-based)**, role-based access control (admin/member/viewer), first-login password rotation, and **Argon2** password hashing.
- **Built** an auto-discovery module system so business plugins register with the core without code changes, plus admin flows for enabling modules and reviewing access requests.

- **Orchestrated** the runtime with **Docker Compose** and **Traefik** for service discovery and routing, with object storage for user-uploaded assets.

3. **Tickety — Event Ticketing Platform (tickets.products.axynoxia.com)**

- **Functional Overview:** Event management and ticket booking, covering the full order lifecycle from checkout through to refunds.
- **Architected** a **TypeScript pnpm monorepo** — a **Vite/React** web app and a TypeScript API with bcrypt auth and cookie-based sessions.
- **Implemented** the order lifecycle end to end, including pending-order expiry and **refund concurrency handling** to prevent double-refunds.
- **Covered** critical booking paths with **end-to-end smoke tests**, and containerized the stack for reproducible deployment.

4. **Roehrdanz Immobilien — Modern CMS and Real Estate Platform(rimmobilien-test.de)**

- **Functional Overview:** Manages real estate property listings, customer inquiries, and professional service presentations with an integrated admin panel.
- **Spearheaded** the delivery of a state-of-the-art real estate platform featuring a custom **MERN-based CMS** (React 19, Express 5, MongoDB).
- **Engineered** a robust admin control-plane for listing administration, featuring **asynchronous Base64 image processing** and dynamic SEO-optimized content rendering.
- **Developed** a secure employee-only dashboard using **session-based authentication**, Bcryptjs hashing, and **RBAC** for content moderation.
- **Optimized** frontend performance using **Vite** and **Tailwind CSS v4**, achieving near-instant load times for high-resolution property galleries.

5. **B-moovd — Bar Reservation and Discovery App (App Store and Google Play)**

- **Functional Overview:** A bar reservation and discovery app, published and live on the **App Store** and **Google Play**.
- **Built** the cross-platform client in **Flutter** (iOS, Android, and web targets) from a single Dart codebase.
- **Implemented** the backend on **Firebase** — Auth, Firestore with hand-written security rules and indexes, Cloud Functions, and Storage.
- **Integrated Stripe** for in-app payments, and shipped the release pipeline for both stores.

6. **B-moovd Ticketing Platform — Event Ticketing Web App (bmoovd-shop.com)**

- **Functional Overview:** A production event ticketing platform for B'moovd Sportsbar Wolfsburg — part of the **Röhrdanz Unternehmensgruppe** — currently selling tickets for **FIFA World Cup 2026** public viewing events.
- **Built** the platform on **Next.js 14** (App Router, TypeScript strict) with **tRPC** for every client-server call and **MongoDB** via **Prisma**.
- **Integrated** three payment providers — **Stripe**, **Mollie**, and **PayPal** — behind one checkout flow.
- **Implemented signed-JWT QR tickets** with in-browser camera scanning for on-site check-in, and generated ticket PDFs plus A4 VAT invoices delivered by email.
- **Secured** the platform with **NextAuth** role-based access (admin, staff, customer) over JWT sessions.

7. **Confortex — Shopify E-commerce (confortex.shop)**

- **Developed** a full-featured **Shopify** e-commerce store for a premium Tunisian bedding brand, covering mattresses, pillows, beds, baby products, and linen.
- **Configured** multi-collection product architecture, custom storefront theming, and SEO-optimized blog content to drive organic traffic.

- **Implemented** free delivery promotions, newsletter integration, and a multi-showroom contact system across 3 physical locations in Ariana, Tunisia.

8. **Vie Sublime — Shopify E-commerce (viesublime.tn)**

- **Built** a premium **Shopify** storefront for a high-end Tunisian furniture brand specializing in artisanal interior, office, outdoor, and school furniture.
- **Structured** multi-collection catalog (Tables and Chairs, Indoor Furniture, Office, School, Garden) with custom theming aligned to a luxury brand identity.
- **Delivered** a content-driven SEO blog, newsletter integration, and multi-location showroom management to support both online and physical sales channels.

9. **Axynoxia Energie — PV + BESS Energy Management and SCADA (energie.products.axynoxia.com)**

- **Functional Overview:** An Energy Management System and SCADA/HMI for a hybrid solar-plus-storage power plant, modelled on the real **ADAM Photovoltaic Project** (Eni Tunisia / METKA EGN): 5.5 MWp PV, 2.2 MW / 1.5 MWh Li-Ion BESS, 2 x 8.25 MVA gas turbines, 20/11 kV interconnection.
- **Built** a **TypeScript monorepo** splitting the domain model, API, control service, HMI, and a plant simulator into separate deployable services.
- **Implemented** live plant telemetry, alarm handling, and supervisory control screens, with plant constants derived from the project's Basis of Design.
- **Deployed** the full stack behind a shared reverse proxy with TLS termination; scoped explicitly as supervisory/advisory control, not safety instrumentation.

10. **ProInvoice — SaaS Invoicing Platform (invoice.products.axynoxia.com)**

- **Functional Overview:** An invoicing platform for the Tunisian market: create, manage, and deliver invoices, with multi-country compliance on the roadmap.
- **Built** a **React 19 + Vite** SPA using **TanStack Query**, React Hook Form and Zod, backed by an **Express/TypeScript** API over **MongoDB**.
- **Implemented** two-factor authentication, **PDF and Excel** invoice generation, and email delivery.
- **Documented** the API with **Swagger** and shipped generated product documentation as a build artifact.

11. **Axynoxia LeadGen — B2B Prospecting Engine (leadgen.products.axynoxia.com)**

- **Functional Overview:** A privacy-first, outcome-based B2B prospecting platform built around real-time data collection and personalized outreach rather than a static contact database.
- **Designed** a **waterfall enrichment** pipeline with a mandatory verification gate — every email is provider-confirmed or independently verified before it is persisted, never a raw guess.
- **Implemented** full per-field **provenance**, recording which provider supplied each value alongside a queryable per-provider attempt log.
- **Built** outcome-based credit billing that charges only for providers actually called, and **GDPR** primitives (suppression list, consent records, data-subject requests) into the schema from day one.
- **Orchestrated** long-running enrichment workflows with **Temporal** and **LangGraph** on a **NestJS** and **Next.js** stack.

12. **Axynoxia CRM and Leasing — Lease Management Platform (crm-leasing.products.axynoxia.com)**

- **Functional Overview:** A CRM and lease management platform for the Tunisian leasing market, covering the lease lifecycle from origination through to accounting.
- **Implemented** a financial engine aligned to **IFRS 16** and **BCT** (Central Bank of Tunisia) requirements.
- **Built** a **10-role RBAC** model and full **Arabic RTL** support alongside the Latin-script interface.
- **Developed** the platform on the **MERN** stack with background job processing, and containerized it for deployment.

13. Habiter Mieux — Solar Lead-Generation Landing Page (habitermieux-renov.com)

- **Delivered** a French-language solar-panel lead-generation site for client Habiter Mieux, built around government-subsidy messaging and a quote-request funnel.
- **Optimized** the page for conversion and search, feeding qualified enquiries straight into the client's sales pipeline.

14. MERN E-commerce — Industrial SaaS Infrastructure

- **Functional Overview:** An industrial-grade retail platform for managing product catalogs, customer orders, and secure checkout workflows.
- **Engineered** a full-featured e-commerce ecosystem using the **MERN** stack, focusing on industrial-grade security via **JWT** and **Argon2**.
- **Developed** an advanced admin dashboard with real-time order tracking, inventory management, and **Multer-integrated** cloud asset handling.
- **Implemented** responsive frontend architecture with **Redux Toolkit** for complex state persistence across purchasing workflows.

15. OMHY Entertainment — Managed Video Hub (omhyfamily.com)

- **Functional Overview:** A premium digital media hub for high-fidelity video streaming, content portfolios, and interactive user experiences.
- **Developed** a premium video-streaming and portfolio platform using **React (Chakra UI)** and **GSAP** for high-fidelity interactive animations.
- **Orchestrated** Zero-Downtime deployments via **Jenkins** pipelines, integrating automated quality gates and security audits.
- **Managed** hybrid database architectures (MongoDB and MySQL) to balance flexible content metadata and strict user transaction history.

16. Jektis Travel — Global E-Tourism Platform

- **Functional Overview:** A global tourism discovery platform for booking flights and hotels with automated real-time price scraping and secure payments.
- **Architected** an automated tourism platform in **PHP**, integrating **Stripe** for payment orchestration and custom web scraping modules for real-time discovery.
- **Developed** automated transactional workflows using **PHPMailer** and custom cron jobs for booking status updates and guest notifications.

17. New Journey — Global Consulting Ecosystem

- **Functional Overview:** A global consulting ecosystem to connect clients with expert advisors, managing professional interactions and service delivery.
- **Developed** a comprehensive consulting platform utilizing **Symfony 7** and **PHP 8.2**, with a focus on modular controller architecture and **Doctrine ORM**.
- **Implemented** dynamic UI components using **Symfony UX Turbo** and Stimulus for a high-performance, SPA-like user experience.
- **Orchestrated** the development environment using **Docker Compose**, ensuring parity between local development and production-ready deployments.
- **Integrated** secure multi-user authentication and role-based access control (RBAC) to manage client and admin interactions.

18. DevOps CI/CD Hub — Industrial Infrastructure (ESPRIT)

- **Built** a full-scale CI/CD platform using **Jenkins**, **SonarQube**, and **Nexus** for versioning artifacts and code quality governance.

- **Automated** the deployment of **Angular** and **Spring Boot** microservices with comprehensive security auditing via **Trivy**.

19. OpenStack Private Cloud Lab — Hybrid Infrastructure (ESPRIT)

- **Deployed** a multi-node **OpenStack** private cloud, orchestrating virtual networks, subnets, and **VPN-over-physical** nodes.
- **Managed** the entire lifecycle of virtualized workloads, implementing automated scaling and high-availability routing for guest web applications.

Education

Software Engineering Degree — ESPRIT 2020 – 2025
Ariana, Tunisia
3 years General Software Engineering | 2 years Specialty: **Cloud Computing — Cloud Architecture and DevOps**

Languages

Arabic (Native) | English (B2) | French (B2)
