Professional Summary

Software engineer who ships products and the cloud they run on. Full Stack Engineer at Bassetti Group (TEEXMA) and founder of Axynoxia, where I have delivered 8 client projects and 7 in-house products from scoping to production. I build web and mobile applications, run them on Azure, AWS and Kubernetes, automate their delivery with Terraform, Ansible and CI/CD, and add LLM features where they save real time.

Technical Skills

Cloud: Azure (Azure Stack Hub, AKS), AWS (EKS, IAM), Cloudflare, OpenStack; hybrid and sovereign cloud.
DevOps: Docker, Kubernetes, Helm, Terraform, Ansible, Jenkins, GitHub Actions, SonarQube, Trivy, Nexus.
Observability and operations: Prometheus, Grafana; Linux, Windows Server, Commvault, Fortinet.
Languages and frameworks: TypeScript, Python, C#, Java; React, Next.js, Angular, Flutter, Node.js, NestJS, Express, FastAPI, .NET.
Data and AI: PostgreSQL, MongoDB, Redis, Prisma, Firebase; LLM integration with Ollama.

Professional Experience

Full Stack Engineer | Bassetti Group, TEEXMA
Apr 2026 to Present | Tunis

- Develop enterprise applications for technical and scientific data management with .NET, Angular and JavaScript on TEEXMA, used across aerospace, energy, automotive, chemicals and pharmaceuticals.
- Maintain Delphi core modules, containerize workloads with Docker and contribute to delivery automation, including Jenkins and Terraform CI, so platform services build and ship the same way every time.

Founder & Software Engineer | Axynoxia
Jan 2026 to Present | Tunis | axynoxia.com

- Lead a software engineering team delivering fixed-scope client projects, from requirements and architecture to full stack build, cloud provisioning, CI/CD and production operations.
- Delivered 8 client projects, including a Flutter app on both app stores, a World Cup 2026 ticketing platform with three payment providers, two Shopify storefronts, a lead generation site and a real estate platform.
- Build and run 7 Axynoxia products (ERP, Energie, GymOS, Tickets, CRM Leasing, Invoice and the company site), the self-hosted ones on one VPS behind a shared Caddy edge proxy, so every new product goes live with TLS and routing in place from day one.

Infrastructure Consultant | RFC (Microsoft Gold CSP Partner)
Oct 2025 to Apr 2026 | Ariana

- Engineered hybrid cloud infrastructure combining Azure Stack Hub and Azure, including sovereign cloud and data residency architectures, Fortinet SD-WAN and Cisco networking.
- Built Python/Flask exporters with Prometheus and Grafana monitoring for 2 Azure Stack Hub datacenters at 15-second resolution, giving operators one view of region health, storage and tenant VMs; administered Commvault backups with restore validation.
- Automated recurring Linux and Windows Server operations; delivered client workshops on cloud security and Microsoft 365 governance.

DevOps Platform Engineer, Final Year Project | RFC
Feb 2025 to Aug 2025 | Ariana

- Built QuickOps, a DevOps as a Service platform across 5 repositories (React, Express, FastAPI, MongoDB) that takes a Git repository to a running, monitored deployment without manual infrastructure work.
- Integrated an LLM engine that inspects repository structure and dependencies to recommend VM or Kubernetes deployment.
- Automated VM provisioning with Terraform and Ansible and microservice deployment on AKS; built Jenkins pipelines with SonarQube, Nexus, Prometheus and Grafana; validated both paths on 2 MERN applications.

Cloud & Full Stack Engineer Intern | RFC
Jul 2024 to Aug 2024

- Built an intern management application deployed on AWS EKS, with CI/CD (Jenkins, Docker, Terraform, GitHub Actions), IAM controls and Prometheus and Grafana monitoring.

Earlier Internships | ESPRIT, Tunisie Telecom
2021 to 2023

- Web Developer Intern, ESPRIT (2023): Python scraping and recommendation platform for online courses.
- Network Engineer Intern, Tunisie Telecom C-NOC (2021): B2B link monitoring and routing incident support.

Projects

Cloud and DevOps

QuickOps | RFC. LLM repository analysis that recommends VM or Kubernetes deployment, then provisions it with Terraform, Ansible, AKS and Jenkins and monitors it with Prometheus and Grafana.

Enterprise Monitoring Platform | RFC. Azure Stack Hub monitoring for 2 datacenters: Dockerized Python exporters on the Admin APIs with OAuth2 service principals, Grafana dashboards and alerts for region health, storage, tenant VMs and disk IOPS.

Client Work (Axynoxia)

bmoovd Ticketing. Ticket shop for FIFA World Cup 2026 public viewing events in Wolfsburg. Next.js 14, tRPC and Prisma with Stripe, Mollie and PayPal checkout, signed QR tickets, camera check-in and emailed PDF tickets.

bmoovd Mobile App. Sports bar app on iOS and Android for the programme, table reservations and live scores. Flutter with Firebase Auth, Firestore, Cloud Functions and Stripe.

Roehrdanz Immobilien (preview). Bilingual real estate platform with React, Express and MongoDB: listings, search filters, enquiries to the agent, employee portal, RBAC and dynamic SEO.

Axynoxia Products

Axynoxia ERP. Modular ERP for operations, finance, inventory and reporting. NestJS, Prisma, PostgreSQL and Redis with MFA, RBAC and Argon2; Docker Compose and Traefik.

Axynoxia Energie. EMS and SCADA/HMI for hybrid solar and battery plants, modeled on a 5.5 MWp PV and 2.2 MW/1.5 MWh BESS site: real-time supervision, control and reporting in TypeScript.

All projects, including client storefronts and Axynoxia products: tamim-hmizi.github.io/Portfolio

Education and Languages

Software Engineering Degree | ESPRIT | 2020 to 2025 | Ariana. Specialization in Cloud Architecture and DevOps (ArcTIC).
Arabic (native), English (C1), French (B2).
